

Abstract

This invention, The Spring Tether, is designed to reduce risk of entanglement and increase safety of a tied or tethered animal, such as an equine, bovine, or such. It also allows the animal more head freedom while increasing the safety. An animal will have the ability to eat or drink from pans or feeders on the ground, to lay down and stand while tied or tethered and The Spring Tether's coils keeps tension which removes excess slack and the risk of entanglement.
